

**MICROBULK**

# MICROBULK SYSTEMS

## Reliable & Cost Effective

It is the most reliable, cost effective alternative to some high pressure and liquid cylinder applications, such as, Argon, Oxygen, and Nitrogen, where volumes are less than those required for traditional bulk systems.

## MicroBulk offers all the advantages of bulk storage...

without the need for a large onsite tank or the hassles and waste of full-for-empty cylinder exchanges.

*"The laboratory at Fox Metro Water Reclamation District has a long standing relationship with Weldstar Company as its primary gas supplier. My experience with Weldstar spans more than two decades. Time and time again, I have looked to Weldstar to handle my laboratory gas needs. Our laboratory's liquid argon micro-bulk, installed in 2007, was handled by Weldstar. More recently, upgrades to the argon delivery piping, including a new point-of-use distribution system and regulators, were provided by Weldstar. We also installed a helium switch-over manifold for chromatography. All of this was coordinated through Weldstar. Weldstar was my first and only choice for these upgrades. Why? Simply service, experience, and customer support that I could count on! Customer service is a critical measure of quality for Fox Metro Laboratory when we choose suppliers. Weldstar lives up to its commitment to us. Keep up the good work!"*

**RANDALL HUMMER**  
Laboratory Supervisor

### TYPICAL MICROBULK APPLICATIONS INCLUDE:

- 450 PSI delivery
- Welding fabricating that requires an Argon gas mix
- Oxy-fuel cutting
- Research and laboratory environments
- Alternatives to traditional bulk where space is a concern
- Other Argon, Oxygen, and Nitrogen applications where minimum volume criteria are met

### WELDSTAR ADVANTAGE

- MicroBulk Specialist
- Gas conservation ideas and implementation
- Pipeline consulting and design
- "Turn Key" solutions
